Logical Thinking

Being able to think clearly and logically is very important for programmers, engineers and scientists.

SOLUTION

4x4 Sudoku

- Write a number in each square choosing from 1, 2, 3 and 4.
- Each row and column must contain each of 1, 2, 3 and 4 exactly once and so add up to 10.

1	4	3	2
4	2	1	3
2	3	4	1
3	1	2	4

HINT: If a row or column already has three numbers, there is only one thing the last number could be. Pencil in all 4 numbers in a square, then cross out the ones it can't be.

Tick the circle when you have attempted the puzzle and so practised the skill.
