

Digital Images

Pictures can be stored in a computer as numbers. Each number gives the colour of one small area of the picture, called a pixel. This is the way digital images are stored in a camera.

SOLUTION

Colour-by- -Number Pixel Puzzle

Recreate this picture by colouring each pixel as given by its number. Look up the colour for each number in the key. For example, colour pixels marked 0 in black, and pixels marked 1 in red.
