Egyptian Survey Puzzle 4

Old records show that this area of the desert contains the tombs of 3 scribes (a large tomb covering 3 squares), 1 artisan (medium, 2 squares) and 1 merchant (small, 1 square).
A survey has gathered information of where tombs could be. Each number tells you how many squares are part of a tomb in that row or column.

Tombs are not adjacent (horizontally, vertically or diagonally).

Can you work out where all the tombs are without further digging?
